

6. Raspberry Pi platform ----- tracking

Note:

A. Before this experiment, we can adjust the sensitivity of the tracking module by rotating the potentiometer of the infrared tracking module to achieve better experimental results.

B. This experiment needs to be done indoors to reduce the interference of sunlight on the infrared receiver.

C. This experiment needs to start the car by pressing the button KEY.

1) Preparation

1-1 Raspberry Pi board

1-2 Infrared patrol module

2) Purpose of Experimental

After running the tracking executable in the Raspberry Pi system, you need to press the K2 to start the car, and the tracking function is started. The robot car will automatically walk along the black line.

3) Principle of experimental

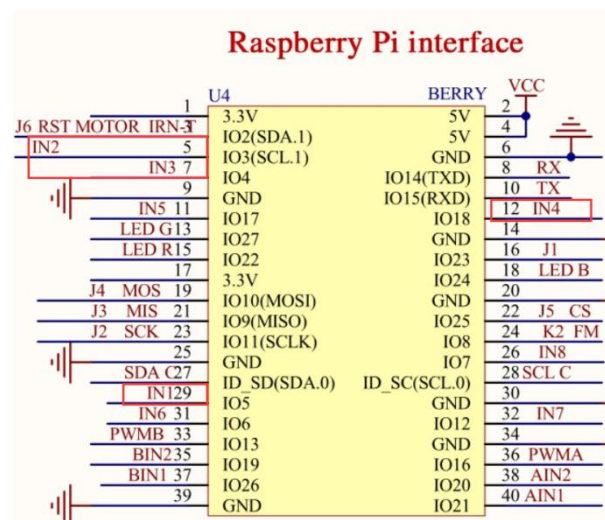

The basic principle of the infrared tracking sensor is to take advantage of the reflective nature of the object. In this experiment, we need the effect that the robot car walk along the black line. When the infrared light is emitted onto the black line, it will be absorbed by the black line, but when the infrared light is emitted onto the other colors line, it will be reflected onto the infrared receiver pin. According to this,

we write the corresponding code to make the car complete tracking function. When the car detects the black line, the indicator status of the infrared tracking module is as shown in the figure below.

4)Experimental Steps

4-1 About the schematic

4-1 Raspberry Pi interface circuit diagram

4-2 Tracking module interface

wiringPi	BCM	Funt ion	Physical pin		Funt ion	BCM	wiringPi
		3.3V	1	2	5V		
8	2	SDA.1	3	4	5V		
9	3	SCL.1	5	6	GND		
7	4	GPIO.7	7	8	TXD	14	15
		GND	9	10	RXD	15	16
0	17	GPIO.0	11	12	GPIO.1	18	1
2	27	GPIO.2	13	14	GND		
3	22	GPIO.3	15	16	GPIO.4	23	4
		3.3V	17	18	GPIO.5	24	5
12	10	MOSI	19	20	GND		
13	9	MISO	21	22	GPIO.6	25	6
14	11	SCLK	23	24	CE0	8	10
		GND	25	26	CE1	7	11
30	0	SDA.0	27	28	SCL.0	1	31
21	5	GPIO.21	29	30	GND		
22	6	GPIO.22	31	32	GPIO.26	12	26
23	13	GPIO.23	33	34	GND		
24	19	GPIO.24	35	36	GPIO.27	16	27
25	26	GPIO.25	37	38	GPIO.28	20	28
		GND	39	40	GPIO.29	21	29

4-3 Raspberry Pi 40 pins comparison table

4-2 According to the circuit schematic:

Left1 infrared sensor-----5(Physical pin)----- 9(wiringPi)
 Left2 infrared sensor-----29(Physical pin)----- 21(wiringPi)
 Right1 infrared sensor-----7(Physical pin)----- 7(wiringPi)
 Right2 infrared sensor-----12(Physical pin)----- 1(wiringPi)

4-3 About the code

A. For .c code

(1) We need to compile this file in the Raspberry Pi system. (Note: we need to add -lwiringPi to the library file.)

We need to input: `gcc tracking.c -o tracking -lwiringPi`

(2) We need to run the compiled executable file in the Raspberry Pi system. We need to input: `./tracking`

```
pi@ya:~/SmartCar $ gcc tracking.c -o tracking -lwiringPi
pi@ya:~/SmartCar $ ./tracking
```

(3) We can input: `ctrl+c` to stop this process, which mean is send a signal to the linux kernel to terminate the current process, but the state of the relevant pin is uncertain at this time, we also need to run a script to initialize all pins.

(Note: The initpin.sh script file is included in the SmartCar/python directory.)

You need to input: `chmod 777 initpin.sh`

`./initpin.sh`

```
pi@ya:~/SmartCar $ sudo chmod 777 initpin.sh
pi@ya:~/SmartCar $ ./initpin.sh
```

B. For python code

(1) We need to input following command to run python code.

```
python tracking.py
```

```
pi@raspberrypi:~/python $ python tracking.py
```

(2) We can input: **ctrl+c** to stop this process, which mean is send a signal to the linux kernel to terminate the current process, but the state of the relevant pin is uncertain at this time, we also need to run a script to initialize all pins.

(3) You need to input: **chmod 777 initpin.sh**

```
./initpin.sh
```

```
pi@raspberrypi:~/SmartCar $ sudo chmod 777 initpin.sh
pi@raspberrypi:~/SmartCar $ ./initpin.sh
```

After completing the above steps, the experiment is over.

5) Experimental phenomenon

After running the programs. **You need to press the K2 to start the car**, and the tracking function is started. The robot car will automatically walk along the black line.
